PTC Nursery System

The PTC uses a cascading delivery for very uniform covering of pots and containers. High Speed production and consistent uniform covering of multiple types of containers from 6" - 15" are characteristics that define this machine.

Variable speed pot feed and variable speed media delivery are standard. Supplied by an all belt system, with one cubic-yard hopper and self-cleaning drive rollers

Quick adjustments make the PTC a very versatile and efficient pot covering system, suitable for Rice Hulls, Bark or other covering media. Direct drive gearboxes and sealed bearings aid in low maintenance.

Guide rail
adjustment

Adjustable soil flow

Specifications
