Adjustable rails

Optional Recirculation

Injector & mix unit for
sterilization

**A proud member of the
BouldinCorp™ Family**

Pro Tray Washer

Recycle trays and flats with the Pro Tray Washer. This automated machine provides speed and efficiency in preparing trays for reuse.

Trays are loaded onto the conveyor belt, then enter a totally enclosed stainless steel hood, where they are washed. The hood provides 18" x 28" x 6'5" of clearance for various sized trays. Pressure pumps provide ample cleaning power with jet nozzles staged for maximum efficiency for clean and rinse cycle. Optional chemical injector can be utilized for wash additives or disinfectant at exit. An optional filtered recirculation system is available to reduce water waste.

Trays exit the washer still carried by conveyor which extends beyond hooded wash unit. Variable speed controls allow the user to set the pace of cleaning. Adjustable tray stabilizing rails provide the user with the ability to change tray size to meet their needs. Available in single or three phase power and can be built to customer specific requirements.

Specifications

Power	220 V single or three phase
Production	Up to 300 trays per hour
Features	Optional recirculation system
	Quickly adjusts to different tray sizes
	Wash and rinse section
	Optional chemical injector for disinfectant

Made in the USA
